Captain Richard Bligh R.N. Porpoise.

S. D. R. O. June 11th 1795

Sir,

It appears that in transcribing from the rough draught or setting the press, the Diameter of the Lantern proposed for Seguin L.t House has been omitted, — It was intended to be ten feet & nine inches.

Thus

These dimensions are the same as those proposed for Montauk & Cape Hatteras Houses. The perpendicular walls of the oil vault, are to be of stone, the Arch over it may be of good brick if made sufficiently stout.

A The Size of the corner posts or upright stanchions of the Lantern, are these which have been tried in other places. The frame of the Light House will be so low, broad & strongly braced, that the weight will not be felt. —

~~(The size of the corner Posts or upright)~~

Ex. The Lamps will be procured by the Government, when of course due attention must be paid to the means of distinguishing the Light.

I do not apprehend that any thing need be done on account of the Lamps in constructing the Lantern.

Your propositions shall be filed & held under candid and

weight will not be felt. —

~~(The size of the corner Posts or uprights)~~

The Lamps will be procured by the Government, when of course due attention must be paid to the means of distinguishing the Light.

I do not apprehend that any thing need be done on account of the Lamps in constructing the Lanterns.

Your propositions shall be filed & held under candid and fair consideration, with all that are and shall be received. — can they not be reduced? since you find so materials a difference in the size of the Lantern? —

I have the honor to be with esteem &c

Signed T. Core C.R.

Henry Dearborn Esq: Pittston
