Port of Passamaquody
June 25th 1806.

Dr Sir

Here enclosed you will receive my Report of the examination for Light House Site.

No 1. is a plan executed by a Surveyor exhibiting the Platt and Site and all that may be necessary for the Establishment I still adhere to my former descriptions on account of elevation and projection as well on in the Vicinity of accessibility embraced within the Platt - I ascended a Tree 26 feet from the Ground but I could not overlook others in the interior - there is high land both to the Northward at Letter A - the Trees pretty tall - and a higher hill in the W. S. W. quarter See Letter F in the Plan is nearly an Hundred Rods - from a Point Letter G. its elevation could not at present be determined as it over hangs the water - made a trial but was unsuccessfull - the Wind blowing fresh - I conjecture its height is 75 feet - it may be lowered by cutting some trees on its Summit for a little distance.

I have been engaged all the past week with a Surveyor and have caused this more accurate Plan to be compiled, having fixed the metes & bounds - to the first Platt - and brushed out & Surveyd the Road before mentioned for further particulars please examine the Plan where in I have endeavoured to have such explanations as my ability permitted

No 2.

№ 2. is the exhibition of another position in the vicinity of the former as fully explained in the references as I was capable of.

№ 3. is the description of the parcels of Lands as laid out by meets & bounds and surrounded by what I conceive will be indispensible to procure in addition let the light be where it may be most approved of the Site pointed out for a Wharf - will be equally an accommodation to either as the most accessable Spot on this Side of the Head - excuse imperfections - I have been rowing against a brisk wind to attain the mail Carrier who is now waiting.

I have the honor to be with all respect and esteem Dr Sir Your very humble Servant

(Signed) Lewis Fred' Delesdernier
