Subj: Information for your guidance subsequent to discharge

1. You are permitted to retain your uniform. Upon discharge you may wear it enroute to your home for a period not in excess of 90 days. Wear your uniform in such a manner as not to discredit the service. After your arrival home, do not wear outer or distinctive parts of your uniform with civilian clothes.

2. If you reenlist in the Coast Guard or any other branch of the service, reveal the character and the reason for your present discharge. Failure to do so is a serious offense.

3. You are advised to report to your local draft board not later than ten days after arrival home. Failure to do so is a serious offense under the Selective Service Act of 1940.

4. You will be offered every assistance in seeking employment upon application to the Veterans' Administration Representative, U. S. Employment Service. Your Civil Service Reginnal Office may also be of valuable assistance.

5. If you desire to continue government insurance subsequent to discharge, checks and money orders should be made payable to the Treasurer of the United States, and premiums forwarded to Collections Sub-Division, Veterans' Administration, 346 Broadway, New York, 13, N. Y., the first permium being accompanied by a statement of information indicating address, facts of discharge, description of policies, etc.

6. You are required to surrender all Identification Cards and you shall not use any identification issued during service in the U. S. Coast Guard.

7. Since your discharge certificate is a valuable document, you will be wise to have it recorded in your city hall or county court house.

SUMMARY OF CASE HISTORY

The subject-named man was admitted complaining of an abscess. His present illness probably began in 1929, when he had gonorrhea twice, and again had gonorrhea in March 1945. In the following July or August his urinary stream diminished in caliber and he developed a periurethral abscess which, after incision and drainage at an Army Hospital in Greenland, healed almost completely except for a small amount of urinary drainage at times.

Patient was first seen at this hospital in September and October 1946, at which time urethral strictures were dilated with sounds up to size 22. His urinary stream remained a good caliber until about one week before present admission, when he began to develop a swelling in his perineal region which was rapidly followed by the discharge of purulent urine through the old fistula tract.

Positive physical findings were limited to the lower urinary tract. Patient had an irregular, slightly tender, 4 cm. diameter mass at the posterior base of the scrotum, at the center of which was a draining sinus from which foul purulent discharge could be expressed. There was a slightly yellow urethral discharge.

Studies for gonorrhea were negative. The urine contained two plus pus. The blood Kahn was negative. Patient was placed on weekly urethral dilatations, beginning first with filliforms and followers, and later going on with metal sounds. Under this treatment, the sinus tract ceased draining almost completely and the patient was again able to void with a good urinary stream. He willrequire periodic dilatations probably for the rest of his life, and with treatment, prognosis is good. However, because of the above findings, it is the opinion of the Board that the subject-named man should be discharged from the U.S.Coast Guard for medical reasons.

Physical complaints are not environmental and will not be alleviated by removal of

INSTRUCTIONS

Enter result as "Primary reaction" (PR); "Accelerated reaction" (AR); "Immunity reaction" (IR) or "Failure" (F).

Inspect primary vaccinations ten (10) to fifteen (15) days after vaccination, revaccinations two (2) to four (4) days after revaccination and later if a primary or slow accelerated reaction is developing. Upon a revaccination first make a control scarification unless the "multiple pressure" method is used.

PR.

Primary reactions are those in which [illegible] redness occurs eight (8) to fourteen (14) days a[illegible] they always have a vesicle.

AR.

Accelerated reactions are those in w[illegible] redness occurs four (4) to seven (7) days a[illegible] they also have a vesicle.

IR.

Immunity reactions are those in which the broadest red[illegible] occurs eight (8) to seventy-two (72) hours after vaccination; such a reaction is evidence of immunity only if fully potent vaccine was used. The vaccine should be kept constantly at or below freezing or be used within two weeks after leaving the manufacturers and be kept in an icebox meanwhile. If these conditions are not known to have been fulfilled, an apparent immunity reaction should be marked with a question mark (IR?).

F.

Failures are all other reactions or no reaction.

U.S. MARINE HOSPITAL, Brighton, Mass.
27 January, 1947

DIAGNOSIS: 740-100,4 Stricture of urethra due to infection.
748-100.2 Periurethral abscess.

STATUS: Incident of service

CC: Abscess

HISTORY: Had GC x2 in 1929 and in March 1945. In July or August urinary stream became swollen and at that time developed a peri-urethral abscess which after drainage (I&D) in Army Hospital in Greenland healed except for a small amount of urinary drainage at times. Was seen here in in Sept. & Oct. and urethral stricture was dilated with filliform and fellows sounds up to #22. Urinary stream remained good & sinus closed completely until about 1 week a go when began to develop a swelling in perineal region with discharge of purulent urine through old fistulas tract. Thinks urinary stream has not diminished.

PE: Has an irregular 4cm dia. mass in base of posterior scrotum-tender with draining sinus-forced purulent drainage. Light yellow U. Discharge.

3-12-47 Discharge Note:

The subject named man was admitted complaining of an abscess. His present condition probably began in 1929, when he had gonorrhea twice and again in 1845. (see history above).

Positive physical findings were limited to the lower urinary tract. Patient had an irregular, slight tender, 4cm. dia. mass at the posterior base of the scrotum, at the center of which was a draining sinus from which foul purulent discharge could be expressed. There was

16—25648-1

Craig

a slightly yellow urethral discharge.

Studies for gonorrhea were negative. The urine contained pus (2 plus). The blood kahn was negative. Patient was placed on weekly urethral dilations, beginning first with filliforms and followers, and later going on with metal sounds. Under this treatment, the sinus tract ceased draining almost completely and the patient was again able to void with a good urinary stream. He will require periodic dilations probably for the rest of his life and with treatment, prognosis is good. However because of above findings, it is the opinion of the Board that the subject named man should be discharged from the USCG for Medical reasons.
