PATIENT INFORMED OF FINDINGS? Yes -- does not desire to submit a statement in rebuttal (Yes or No)

SUMMARY OF CASE HISTORY This patient was found to have CNS Lues in September 1941 and gave History of inadequate treatment three years prior to this. At this time he was found to have positive spinal fluid and was placed on Mapharsen and Tryparsamide. Treatment has more or less been continuous since then and spinal fluid was still positive in 1944. On 6-1-44 he was inoculated with Malaria and sustained 51 hours of fever above 103. This reversed his spinal fluid. Since then he has been Wasserman-Fast and has received almost continuous treatment. Following an accident in April or May of 1945, he has complained of blurring of vision which comes and goes. He has been seen in our out patient clinic on several occasions with reference to his eye complaints and at times he would read 20/20 plus in both eyes and half and hour later would not be able to read over 20/200. The visual fields would be normal during his " 20/20" stage but would be abnormal during his "blurred visions". In July he was completely examined for CNS Lues. This was negative, but Wasserman still positive and the V.D. service stated that no further treatment is necessary. He was seen by our consultant Dr. Rudolf Aebli whose opinion was that he had beginning Argyl Robertson pupil, bilateral and an old optic neuritis with glial tissue in the lower nasal part of the left disc.

In 1944 he had swelling under the tip of the tongue on the left which extended down into the floor of the mouth and was diagnosed as inflammation of the left submaxillary duct. Since that time there has been much manipulation and dilatation of this duct and multiple fistulae have formed. He has been under our observation for several months and we have to open these fistulae on several occasions.

It is our considered opinion that this man is not fit for full duty in the Coast Guard because of his eyes and this repeated obstruction of the left submaxillary duct.
